

What sensors can I use on my Elertus smart sensor?

- The Elertus smart sensor comes with one accessory plug, but you can get a Y cable to use a second accessory on this unit. Your accessory options include a door sensor, a water sensor, and an external temperature sensor.
- If you are using the Y cable you can use the door sensor with a second door sensor or a temperature probe, but not a water sensor.
- You can also use a water sensor with a second water sensor, or with a temperature sensor.
- You cannot use one door sensor with one water sensor. If you want to monitor a door as well as monitor for a water leak you will have to get two smart sensors, and get one of the probes for each.
