Can I monitor for temperature extremes with my WisDom?

Yes! You can use the [WisDom Temperature Bundle](http://support.diycontrols.com/index.php?View=entry&EntryID=52) to set a high and low temperature limit. The WisDom system will generate an alarm if the temperature goes outside of these limits.

NOTE: You should always program temperature and flood detectors as Zone Type "Special Emergency". This way the WisDom will receive alarms from these units even if it is disarmed.
